

Étude d'Échantillonnage MCMC en VMC
Système: TFIM 1D ($h=1.0$) | Taille: $L=4$ | Ansatz: LogStateVector | LR=0.005 | diag_shift=0.01

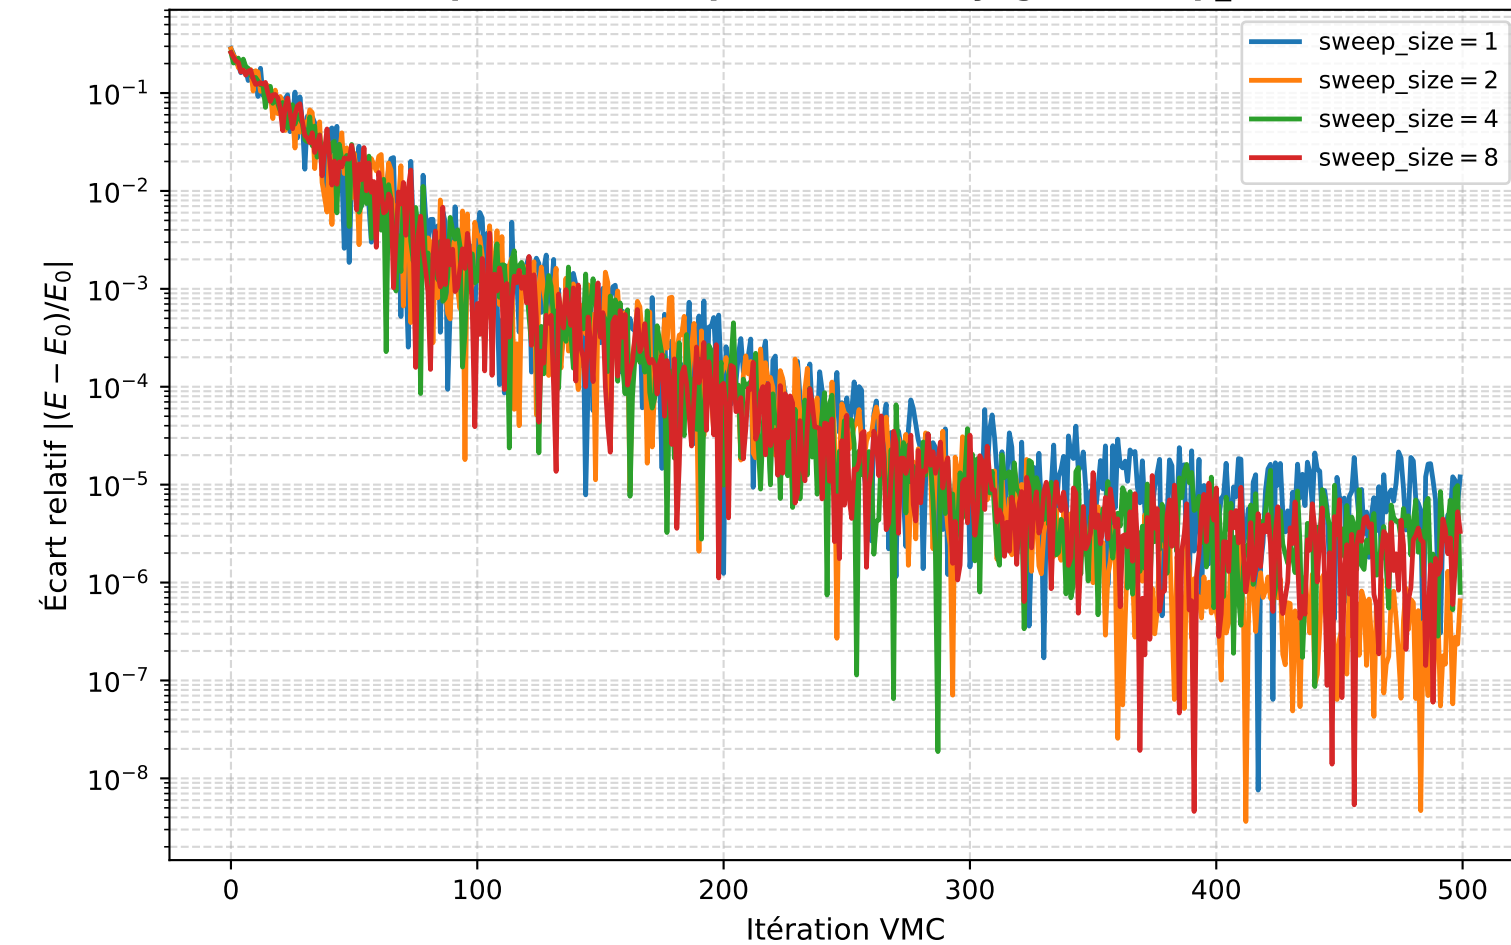

1. Impact du Budget d'Échantillons ($N_{samples}$)

2. Structure des Chaînes ($N_{chains} \times L_{chain} = 512$)

3. Impact de la Fréquence de Balayage (`sweep\_size`)

4. Impact du Burn-in (`n\_discard\_per\_chain`)
